The Structure and Development of Science (Boston Studies in the Philosophy and History of Science)

This is the second, and final, volume to derive from the exciting Kronberg conference of 1975, and to show the intelligent editorial care of Gerard Radnitzky and Gunnar Andersson that was so evident in the first book, *Progress and Rationality in Science* (Boston Studies in the Philosophy of Science, Vol. 58). Together they set forth central themes in current history and philosophy of the sciences, and in particular they will be seen as also providing obligations: research programs, metaphysical inevitabilities, methodological options, logical constraints, historical conjectures.
