Percutaneous Mitral Leaflet Repair: MitraClip Therapy for Mitral Regurgitation

Percutaneous Mitral Leaflet Repair: MitraClip Therapy for Mitral Regurgitation

Mitral regurgitation (MR) affects millions of patients worldwide. It is a progressive condition that can worsen when left untreated, possibly leading to compensatory remodeling of the left ventricle. This can result in reduced functional capacity, poor quality of life, repeat hospitalizations, and even death from heart failure. Open, arrested heart surgery has until now been the therapeutic treatment of choice. However, many high-risk patients cannot tolerate traditional heart surgery and continue to suffer from severe MR.

In **Percutaneous Mitral Leaflet Repair: MitraClip Therapy for Mitral Regurgitation**, international experts discuss the clinical application of percutaneous mitral valve therapies for this subset of patients, focusing on the MitraClip device. These new therapeutic developments will form an essential component of the interventional cardiologists'™ armamentarium in treating MR patients and will be of interest to every practicing cardiologist.

Key topics include:

An overview of the anatomy and pathophysiology of the mitral valvular complex and MR

EVEREST trial outcomes, and the development of percutaneous edge-to-edge repair

Updates on the global experience with this new therapy

Patient selection and the role of percutaneous therapies for high-risk patients

Echocardiographic guidance, including practical tips for the use of transesophageal echocardiography during a procedure

Step-by-step techniques, plus tips and tricks for getting the best results for your patients

Special considerations for treating the returning MR repair patient

Discussion of the European experience since CE approval

Future directions in percutaneous mitral valve therapies
