Advanced Protocols in Oxidative Stress II (Methods in Molecular Biology)

Expanding upon the research elucidated by the first volume of this collection, *Advanced Protocols in Oxidative Stress II* presents thirty additional cutting-edge chapters focusing on novel techniques for detecting ROS/RNS, unique AOX technology and applications, gene expression and biostatistics for evaluating OS-derived experimental data. The international panel of authors also provide animal models and numerous studies concentrating on mitochondria during hypoxic conditions using advanced methods for pO₂, peroxynitrate, reactive S-nitrosothiols, lipid peroxides, COX, and the mitochondrial membrane potential. Due to the dynamic nature of this topic, this book is the second of several volumes of *Advanced Protocols in Oxidative Stress*, all included in the highly successful *Methods in Molecular Biology*TM series. As part of the series, the chapters of this volume present brief introductions to the respective subjects, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting to ensure easy replication of the technology involved.
