Achieving sustainable cultivation of maize Volume 1: From improved varieties to local applications (Burleigh Dodds Series in Agricultural Science)

Maize is one of the most important and widely grown cereal crops in the world and is a staple food for almost a billion people, particularly in the developing world. It has been estimated that maize yields need to increase by 60% by 2050. There is an urgent need to increase yields in the face of such challenges as climate change, threats from pests and diseases and the need to make cultivation more resource-efficient and sustainable.

Drawing on an international range of expertise, this collection focuses on ways of improving the cultivation of maize at each step in the value chain, from breeding to post-harvest storage. Volume 1 reviews research on breeding and its use in improving nutritional quality and agronomic performance. It then goes on to discuss the challenges in translating these advances into effective outcomes for smallholders in the developing world.

Achieving sustainable cultivation of maize Volume 1: From improved varieties to local applications will be a standard reference for cereal scientists in universities, government and other research centres and companies involved in maize cultivation. It is accompanied by Volume 2 which reviews improvements in cultivation techniques as well as the management of pests and diseases.
